Rules to Upload the Assignments of This Year & Declaration of Independence

;

1 Sign-up for the project

Sign-up and project creation are performed through the following link: https://classroom50.org/LUH-VSS/distributed-systems-2026/assignments/assignments/accept. To sign-up for the project, **commit a file** called "`pin.txt`" that **only contains your result PIN** (ErgebnisPINs). It is required to run the tests associated with each assignment only using your personal user ID (ErgebnisPIN), as we specifically verify the test results for grading purposes.

2 Sign this document to comply with the assignments rules of this year

Sign this document with name, date, and place to acknowledge the rules of the assignments of this year and the declaration of independence. Commit the file under this name: `rules_acknowledgement_name_surname.pdf` (replace with your name where needed) to the root of your repository. This is to make sure you have acknowledged what it is expected from you and will proceed accordingly when submitting your code. Failure to commit the signed document will render your submissions void.

3 Uploading frequency

We release two tests per week for each assignment. There are going to be six assignments in total, and you will have roughly 2 weeks to complete one, with an overlap of one week between assignments 1 and 2, 3 and 4, and 5 and 6, respectively.
The deadline for each assignment is announced in the corresponding document that describes the tests. After the deadline, the assignment's corresponding server will be shut down.
Please note that we are reviewing the connection between your commit history and your activity on the server (when you pass the tests) to verify the consistency and continuity of your work.

4 Commit history and repository's structure

The development of programmed code for large scale distributed systems is a learning objective of the course and therefore proper use of GitHub is part of the assessment. The commit history of your repository will be checked to make sure you respect the uploading frequency described at the previous step. Insufficient documentation of incremental work in the commit history can be reason for the solution to be denied. Only work on the **main** branch will be reviewed and graded. You may to create additional branches while working on your assignments, but be sure to merge your final work into `main`.
Keep your repository organized and easy to navigate by placing each assignment in its own folder. Use the following naming convention: `assignment_1` for Assignment 1, `assignment_2` for Assignment 2, and so on. For the final project, use a folder named `final_project`. You will have to subsequently change the Java package declaration in your client code into something like: `package de.luh.vss.chat.assignment_1.client;`. Note: Do not use hyphens in the Java package declaration, you can only use underscores, as hyphens are misinterpreted as subtraction operators.

For example your root of the repository should look something like this:

```
README.md
pin.txt
rules_acknowledgement_name_surname.pdf
```

```
common/
assignment_1/
  client/
    ChatClient.java
...
final_project/
```

5 AI usage

This course teaches fundamental methods for designing and implementing distributed systems and practices them in the execises and project.
The use of any form of generative AI or similar tools is therefore forbidden for didactic reasons. The compliance with this rule is confirmed through the declaration of independence.

Unabhängigkeitserklärung / Declaration of Independence

;

Erklärung

Ich erkläre, dass die Arbeit vollständig von mir selbst verfasst wurde und ohne Unterstützung durch Dritte oder Hilfsmittel (z. B. generative KI) entstanden ist. Ich bestätige, dass die Arbeit in gleicher oder ähnlicher Form nicht bereits einer anderen Prüfungsstelle zur Bewertung vorgelegt wurde.

Declaration

I declare that the work is entirely my own and was produced with no assistance from third parties or tools (e.g., generative AI). I certify that the work has not been submitted in the same or any similar form for assessment to any other examining body.
